<p>用于生化、免疫、血清等临床医学检验中获得高品质血清样本。血清分离胶是一种由多种化合物所组成之半固体惰性胶，该分离胶全部采用医用高分子材料合成，采用离心后，将分离成血清（上层）、血清分离胶（中层）及血球（下层）。试管中间厚一层血清分离胶能完全隔离血清及血球，让血球无法接触到血清，从而保证了血清的纯净度。操作时血液采集到分离胶管后，立即轻轻的反覆颠倒5-5次（使血液与促凝剂充分混合），待血液完全凝固后，（一般约15分钟左右）将分离胶管置于离心机内，离心转速保证在3000-3500r/min，离心5-10分钟，即可获得所需之血清。并将此管直接置入自动生化仪内，进行生化检测。</p> <p>Applying to the acquisition of high-quality serum specimen for biochemical immunological and serum clinical examination. Serum separation gel is a kind of semi-solid inert gel, which composed of several compounds and synthesized by medical polymeric material. After blood centrifugation, the specimen can be separated into serum(top), separation gel(middle) and blood corpuscle. In the middle of the tube, a thick layer of separation gel can completely isolate serum from blood corpuscle, so as to ensure the purity of serum. When blood was collected to serum separation tube, we should immediately invert the tube gently for 3-5 times(so as to mix blood fully with coagulant). After the blood completely solidified(usually for nearly 15 minutes), the tube was put into the centrifuge, making sure that the speed of rotation would be 3000-3500r/min, and after 5-10 minutes we could get the serum we needed. And then we put the tube directly into the automatic biochemical analyzer to carry out biochemical test.</p>
